```

### 1.0.3 Preprocessing: deleting some letters that are not related to the recipes

```
[18]: regular_punct = ["\n", "Enlarge this image", "", "This article originally appeared_  
      ↪in The New York Times..."]  
  
def remove_unnecessary(text, punct_list):
```

```

    for punc in punct_list:
        if punc in text:
            text = text.replace(punc, ' ')
    return text.strip()

df['Full text'] = df['Full text'].apply(lambda x:
    ↪remove_unnecessary(x, regular_punct))

```

## 2 Our dictionary of country names and their demonyms:

```

[19]: # open file in read mode
country_dict = {}
convert_country = {}
with open("countries.csv", 'r') as f:
    for line in csv.reader(f):
        country_dict[line[0]] = line[1:]
        convert_country[line[0]] = line[1]

```

```

[20]: continents = {}
with open("continents.csv", 'r') as c:
    for line in csv.reader(c):
        continents[line[0]] = line[1]

```

```

[21]: empty = ''
for value in country_dict.values():
    if empty in value:
        value.remove(empty)

```

```

[22]: df.insert(1, "Country", "")
df.insert(2, "Continent", "")

# Get country names mentioned in each article
for index, row in df.iterrows():
    for word in row["Full text"].split():
        for key, value in country_dict.items():
            if word in value:
                df.loc[index, 'Country'] += key + " "

```

```

[23]: # Get the most frequently mentioned country
for index, row in df.iterrows():
    lst = Counter(row["Country"].split()).most_common(1)
    name = ""
    if lst:
        most, number = lst[0]
        name = convert_country[most]
    df.loc[index, "Country"] = name

```

```
[24]: # Get the continent name for most frequently mentioned country
for index, row in df.iterrows():
    name = row["Country"]
    continent = continents[name] if name else ""
    df.at[index, "Continent"] = continent
```

## 2.1 Divide into 4 eras

```
[25]: era1 = df.loc[(df["Publication year"]>= 1980) & (df["Publication year"] < 1990)]
